LAMINATED TUBE MAKING AND FILLING MACHINE

KOMBIS FFS60

OLD TECHNOLOGICAL PROCESS VS. KOMBIS FFS TECHNOLOGY

The advantages of NEW MACHINE - FFS60

- Cuts unnecessary movements and operations
- Tube body is formed and filled only in one position – vertical
- Tube body is oriented only once
- Tube body is formed on a mandrel and it is supported by the mandrel until the filling process starts
Thus, **very thin** tubes can be made and filled without denting and **OVALITY** is no longer a problem for the filling machines
- Elimination of carton boxes, storage space and transportation of the empty tubes
Thus, less wastage, less risk of contamination, less expenses

Innovative and bright thinkers – this machine is for you

FFS60 Compact & Intelligent

PARAMETER KOMBIS FFS60	
OPERATION MODE	AUTOMATIC
FOIL TYPE	ABL and PBL
FOIL TOTAL THICKNESS	0,175 – 0,330 mm for ABL 0,300 – 0,400 mm for PBL
NOMINAL SPEED	60 ABL tubes / min 50 PBL tubes / min
TUBE SIZES	
TUBE DIAMETER RANGE	16 – 50 mm for ABL 22 – 50 mm for PBL
TUBE LENGTH RANGE	90 – 200 mm
FILLING VOLUME	5 – 250 ml
DOSING ACCURACY	± 0,5%
